Protective covers shield the lock cylinder and key from adverse environmental conditions such as moisture, dirt, and sleet. The protective covers also protect the key from accidental damage. We highly recommend protective covers for outdoor installations.

**SD Series Push On**: The push on protective cover can be placed over the lock cylinder when the key is in the held position or removed. One end of the protective cover chain is attached to the top of the protective cover and serves to retain the cover when removed. The other end has a mounting ring, which is secured under a mounting bolt head. The flip open protective cover is made from stainless steel.

On a multi-cylinder interlock, all of the push on protective covers are tethered together and secured with a single mounting ring for your convenience.

**SD Series Flip Open**: The flip open protective cover is hinged and is held closed with spring tension. It is designed to protect the lock cylinder and key regardless of the position of the key. The flip open protective cover is attached to the lock cylinder with a stainless steel set screw. The flip open protective cover is made from stainless steel.

**LOTO FLIP COVER (can be used on both SD & HD Series)**: The HD LOTO protective cover is hinged and held closed with spring tension. It is designed to protect the lock cylinder when the key is removed. The flip open protective cover is attached to the lock cylinder with a stainless steel set screw. The flip open protective cover is made from 316 stainless steel.
