Ensuring Safety & Efficiency at the Loading Dock

Salvo Loading Dock Safety Systems

Protecting Personnel at the Loading Dock

With ecommerce on the rise, warehouse facilities are faced with pressure to increase throughput at their facilities that often results in hazardous work environments, especially near the loading dock. In the US, more than 25% of all industrial accidents occur at the loading dock, and for every accident, there are about 600 near misses.

Salvo Loading Dock Safety Systems reduce the risk of accidents at the loading dock by preventing drive-aways during loading/unloading by interlocking the trailer's air brakes with the dock door. This ensures that the trailer cannot depart until loading/unloading is completed and the dock door is closed. Salvo Loading Dock Safety Systems keep your personnel and equipment safe by – eliminating human error.

Salvo SAMD Loading Dock Safety Kit

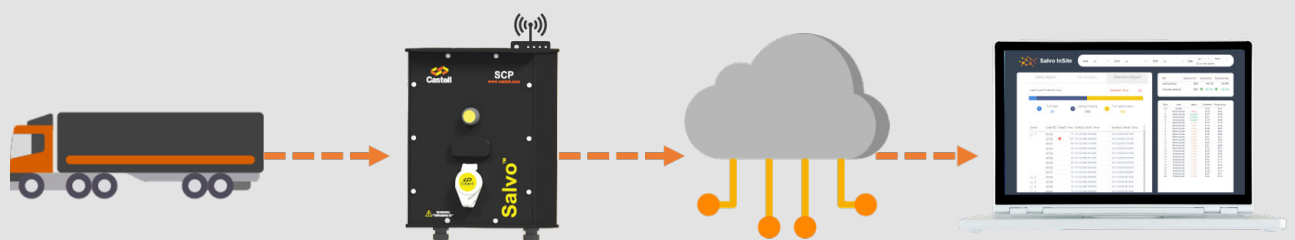

Salvo InSite

Transforming Loading Dock Performance Through Data Analytics

Making decisions without data can lead to poor planning, extra costs and hidden inefficiencies. Salvo InSite is a digital add on to the Salvo Loading Dock System that provides real time dock status, performance analytics, and traceability reports - ensuring maximized efficiency at the loading dock is achieved while keeping personnel safe.

Key Benefits

- Optimize Performance
- Track Results
- Managed Safety Compliance
- Reduce Cost and Effort

Truck arrives at the loading dock

Data is collected through the Salvo Control Panel automatically

Data is stored securely in the cloud

Performance Analytics can be accessed through a web browser globally
