Transform Loading Dock Performance Through Data Analytics

A Safe Solution that Maximizes Productivity

Salvo InSite is a web application that brings safety and productivity to the loading dock. The platform digitizes the Salvo Loading Dock Safety System, currently in use at tens of thousands of docks around the world. With Salvo InSite, data is automatically recorded and transmitted to the cloud providing real time information on the status of the loading dock. The Salvo InSite platform allows facilities to make informed decisions, ensuring maximized productivity at the loading dock is achieved while keeping personnel safe.

Real Time Dock Status

Performance Analytics

Traceability Reports

Optimize Performance

Identify inefficiencies and bottlenecks in loading dock operations through automatic data capture and visualization.

Track Results

Increased understanding of how operational changes are affecting loading dock performance through dashboards, historical reports and live KPIs.

Managed Safety Compliance

Safety at the dock is managed through site usage reports, ensuring the loading dock safety system is being used correctly.

Reduce Cost and Effort

Costs associated with manual data entry, analysis, detention fees and claims are reduced through automatic data capture and historic traceability capabilities.
